

“Addressing developmental delays as early as possible can make a profound /great difference in a child’s life”.MMRI established in 2018, as an initiative of MAA ENT Hospitals to provide assistance and support with holistic development approach for the children with special needs.

MMRI is a child rehabilitation center focused on providing early intervention services to the children with special needs between the ages 0 to 8 years. Here we believe that every child is special and that early intervention can provide them the assistance and support they need to excel in their early childhood. Our aim is to empower and instill independence in children with special needs(Autism and other childhood developmental concerns) through early therapeutic intervention approaches. Our center provides an environment where children and their families can make all their dreams come true.

Our team of therapists are well trained and experienced to address the challenges that a child may face and facilitate a learning environment which will assist them in coping with life’s demands.

At MMRI we provide an infrastructure which will support our therapists to enhance the growth and development of a child whilst keeping safety as our top priority.

OUR TEAM

MMRI team is a highly competent and focused group with deep expertise in the fields of Psychology, speech and language, occupational therapy, sensory integration, special education and other relevant therapies.

OUR SERVICES

- ▶ Early Intervention services include comprehensive screening, assessment, diagnosis and individualized therapy program
- ▶ Speech and language therapy
- ▶ Behaviour Therapy
- ▶ Occupational Therapy
- ▶ Sensory Integration therapy
- ▶ Special Education
- ▶ Physiotherapy

Psychology and counseling

In MMRI, we have a team of specialized Clinical and Rehabilitation Psychologists who are trained to administer psychological and developmental assessments for children. They also work with parents to develop inclusive and integrated home management strategies.

Developmental evaluation can help families to identify children with special needs, and provide information about the requirement of early intervention which would help children reach their full potential both at home and at school. Our team of psychologists and behavior therapists enhance the parents’ understanding of their child’s difficulties and spend time in establishing a shared goal between the team and the caregiver. The multi- disciplinary team continually monitors the child’s progress in therapy in order to identify areas of growth, to determine efficacy of treatment plans, and/or to recommend modifications to the ongoing treatment.

Occupational Therapy

Occupational Therapy works on sensory difficulties, motor planning, visual perception skills, with modifications to their fine motor skills and self-care tasks, which may be difficult for the child to exhibit. Our OT team helps children with developmental challenges to improve/develop skills that will lead to success in everyday life functions.

OUR OTHER SERVICES INCLUDE:

- ▶ New Born hearing screening
- ▶ Audiology
- ▶ Psychological services
